Encouraging arguing in class boosts results

Encouraging pupils to argue in class can help boost their results in English, maths and science. Getting primary school children to explain their answers and reason with their classmates can help youngsters make more progress in these core subjects, it suggests. A total of 78 primary schools in England with higher-than-average numbers of poorer children took part in the trial of "dialogic teaching", published by the Education Endowment Foundation (EEF). An independent evaluation of the initiative found the youngsters who took part made more progress.
